COMPILE NEW SCIENTIFIC MAPS

[Numbers in parentheses refer to appended sources.]

The Institute of Geology and Geography, Academy of Sciences Latvian SSR, has done much work recently in compiling maps of the republic. During the past year, two groups of scientific workers under the leadership of K. Ya. Tsukermans have investigated Latvian waters and have made several hundred analyses. At present, the institute is preparing three maps of Latvia -- a geological map, a hydrogeological map, and geological map of the quaternary period.(1)

In Moscow, the Food Industry Publishing House has published a large, two-volume atlas on the commercial varieties of fish found in the USSR. Oceans and seas surrounding the USSR contain over 1,000 types of fish, of which 250 are commercial varieties. The atlas was compiled by more than 50 Soviet scholars under the direction of L. Berg.(2)
